

From one clue to auditable literature

Moxian Qian | github.com/qxxmax/skillforpaper

How it works

Public SPS run

19 / 19 gates passed

593

deduplicated candidates

37

full-text papers checked

776

PDF pages

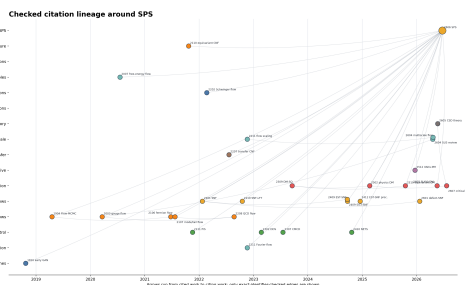

185

evidence entries

What it produces

- **literature_matrix.csv / xlsx**
identity, screening status, reading depth
- **paper_reading_record.md**
methods, formulas, experiments, source locations
- **lineage + claim ledger**
lineage, sources, boundaries, open questions

Real output: checked SPS citation lineage

Every number has a source | abstracts do not replace full text | path scores are not scientific evidence

Invoke in one prompt

```
Use $play-the-toy-with-children.  
intent=cover, scan=full, graph_mode=on, optimizer=dijkstra.
```

Start from SPS, expand over multiple rounds, return to the original sources each round, and preserve sources, boundaries, and open questions.
